ABOUT ME

A motivated and adaptable software engineer with a strong interest in web development and modern software technologies. I am committed to continuous learning, quickly adapting to new tools and environments, and contributing effectively within a team. I value clear communication, active listening, and collaboration to deliver high quality outcomes. With hands-on experience from internships and academic projects, I am eager to apply my technical skills in a real world professional setting and grow into a reliable software engineering professional.

EDUCATION

SRI LANKA INSTITUTE OF INFORMATION TECHNOLOGY

2021-2025

BSc (Hons) in Information Technology Specialising in Information Technology

MAHANAMA COLLEGE COLOMBO -03

G.C.E. Advanced Level Examination

2020

- Combined Mathematics: S
- Physics: S
- Chemistry: C

G.C.E. Ordinary Level Examination

2016

- Passed with 8 A's and 1 B

SKILLS

Programming Languages: Java, Python, C/C++, PHP, JavaScript

Frontend: HTML, CSS, React

Backend: Node.js, Express.js, PHP (CodeIgniter), Spring Boot

Databases: MySQL, MS SQL, MongoDB, Firebase

Tools & Platforms: Git, GitHub, AWS, Azure, Postman, Swagger, Linux

Mobile Development: Kotlin, React Native, Flutter

WORK EXPERIENCE

Earrow (Pvt) Ltd - Intern Software Engineer

APR 2024 – OCT 2024

- Assisted in developing web applications using PHP, CodeIgniter, MySQL, jQuery, HTML, and CSS.
- Contributed to modules for Higher Education Management Systems as part of an ongoing client project.
- Participated in client requirement gathering sessions and supported documentation of technical needs.
- Fixed bugs, enhanced UI components, and supported integration tasks under guidance from senior developers.
- Gained hands-on experience in MVC architecture, database design, and application maintenance.

Earrow (Pvt) Ltd - Trainee Software Engineer

December 2024 – February 2025

- Developed and maintained production level features using PHP (CodeIgniter) and MySQL.
- Improved query efficiency and code reliability through refactoring and best practice application.
- Worked in a Linux (Ubuntu) development environment, performing system support and configuration tasks.
- Collaborated with team members during development cycles to ensure timely delivery of project requirements.
- Followed version control practices (Git) and contributed to internal knowledge sharing.

- Working on research oriented software projects involving Machine Learning model development, evaluation, and experimentation.
- Designing and implementing backend APIs using FastAPI for ML model integration and data processing.
- Developing end-to-end web applications using the MERN stack (MongoDB, Express.js, React.js, Node.js).
- Building RESTful APIs to support frontend & backend communication and scalable system architecture.
- Performing data preprocessing, feature engineering, and model training using Python based ML libraries.
- Collaborating with clients/research teams to define project objectives, technical requirements, and deliverables.
- Using Git for version control and maintaining clean, well-documented codebases.

PROJECTS

- **Biomechanical Analysis for Weightlifting Performance Enhancement**

Technologies: Machine Learning, 3D Modeling

Role: Developed a mobile application enabling real-time analysis of training videos. Implemented 3D models to visualize correct weightlifting techniques and provided tailored performance recommendations and instant corrective feedback to users.

- **Banana Leaf Disease Detection Mobile Application**

Technologies: Python, Machine Learning, FastAPI, Flutter, Image Processing

Role: Designed and developed a mobile application to detect banana leaf diseases using image based machine learning. Implemented a FastAPI backend to process uploaded leaf images and generate disease predictions. Developed the Flutter mobile interface to capture images via camera or gallery and send them to the backend API, enabling real time disease detection and result display.

- **Online Garbage Collecting System**

Technologies: MERN Stack (React.js, Node.js, Express.js, MongoDB)

Role: Created the Leave Management System enabling staff to submit leave requests, track approvals, and manage leave history within the garbage collection workflow.

- **Online Shopping App for Visually Challenged People**

Technologies: Kotlin, Android Studio, Google Firebase

Role: Developed dynamic theme adaptation features that adjust the app interface based on user visual impairment profiles

- **Social Media Web Application for Gym**

Technologies: Spring Boot

Role: Contributed to the development of a social media platform tailored for gym members to share updates, training tips, and community engagement.

- **UX/UI Website Redesign**

Technologies: Figma

Role: Designed and prototyped a website with a focus on identifying and resolving UX/UI issues to improve usability, accessibility, and user satisfaction.
